

WHAT IS BUILT AND WHAT IS PROPOSED

CLAIM	MECHANISM THAT ENFORCES IT	STATUS	EVIDENCE IN THE REFERENCE KERNEL
Delegation cannot enlarge authority	Attenuated lease; ancestor intersection	BUILT	<i>test_lease_cannot_expand_any_authority_axis</i>
Parallel siblings cannot multiply a budget	One task envelope; atomic reservation	BUILT	<i>test_aggregate_sibling_budget_does_not_multiply</i>
Separate processes cannot race a commit	Serialised authorisation and commit	BUILT	<i>test_independent_processes_serialize_budget_and_release</i>
Composition cannot erase a restriction	Bound source labels; recipient checks	BUILT	<i>test_potential_source_to_sink_path_denied_even_for_clean_message</i>
Memory cannot carry a restriction away	Reauthorised memory; restart persistence	BUILT	<i>test_restart_preserves_memory_restrictions_budget_and_rejects_legacy_adapter</i>
Revocation invalidates in-flight authority	Task epoch revalidated at every use	BUILT	<i>test_effect_approval_substitution_and_guardian_epoch_invalidation</i>
A release cannot resume after revocation	Per-chunk reauthorisation	BUILT	<i>test_stream_reauthorizes_every_chunk_and_bulk_cannot_bypass</i>
Checking each step is not checking the sequence	Stateful harness against a reference model	BUILT	<i>test_stateful_sequences_hold_and_find_counterexamples_when_a_control_is_removed</i>
The same bound holds across distributed workers	Shared epoch and reservations	PROPOSED	<i>Evaluation plan, section 4</i>
A delivered external effect can be undone	Adapter reconciliation only	NOT CLAIMED	<i>Stated limit</i>

Every BUILT row names an offline regression test. PROPOSED rows are obligations this abstract specifies and does not evaluate.
