

GUARDIANS OF THE STATE

How We Built an Air-Gapped
AI Fortress for Consumer Data

Rachna Srivastava
California Department of Financial
Protection and Innovation (DFPI)
AI Engineer World's Fair 2026

The speed of deception has exploded. The cost has collapsed.

Voice implies a person

Face implies physical presence

Signature implies verification

Seeing is no longer believing. The internet is no longer a safe environment for verification.

Secure

Protecting the highly sensitive records and personally identifiable data of 40 million Californians.

Learning

Adapting continuously to fraud tactics that evolve every week.

Defensible

Every output must be explainable, reproducible, and capable of withstanding legal scrutiny.

The illusion of control: why traditional safety measures fail modern AI.

Control	The Assumption	The AI Vulnerability	The Receipt
Encryption	Protects data in transit/rest.	Inference requires plaintext. A single prompt injection reads memory.	Model decryption exposes the context window.
Private Endpoints	Vendor isolation.	Vendor owns the disk. CLOUD Act applies.	Legal compulsion beats software boundaries.
Anonymization	Stripped PII is safe.	Embeddings carry meaning. Vector spaces can be reverse-engineered.	Meaning translates back to identity.
Certifications (SOC 2)	Paper guarantees security.	Assumes trust. Breaches bypass paper.	Okta (Breached). LastPass (Breached). Microsoft 2023 (State Dept detected the breach, not MS).

Every control assumes trust. Cutting the wire makes failure physically impossible.

AI quality problems are data engineering problems wearing an AI costume.

Hallucinations dropped. | Latency dropped. | Accuracy improved.
The model didn't change; we just stopped feeding it garbage.

Hiding the person: Turning a data breach into a cryptographic puzzle.

To reverse the hash, an attacker must physically walk into our building and remove a device from the rack.

THE COMPLEXITY FUNNEL

We were using a neurosurgeon to take blood pressure.

- Same hardware. No new GPUs.
- 3x throughput.
- 70% lower cost per investigation.

Trust physics before configuration.

Data flows in. It is physically impossible for data to leak out.

The Quarantine Zone and the Immutable Ledger

In a court of law, "we think this is what the AI knew" is not an answer. Apache Iceberg provides the exact state of the system, cryptographically signed and time-travel queryable.

"Here is the exact state of the system at 3:14 PM last Tuesday, unchanged since."

The Fortress in Motion.

A unified, physically constrained organism.
Information enters. Nothing leaks. The wire stays cut.

Today, we are talking about **FRAUD**.

Ten years from now, complex architectural problems will live inside—

UNTRUSTED INFRASTRUCTURE IS A FLAW.

You cannot build civilization-scale intelligence on top of untrusted infrastructure.

**Trust is not a policy. Trust is a
property of the system.**

History will not remember the models we trained.
It will remember whether the systems we built could
be trusted, when it mattered most.
